Top Industries by Revenue

Executive Overview –

This dashboard provides a quick summary of the financial performance of **4,668** companies by highlighting overall profitability, growth, capital efficiency, debt exposure, top revenue-generating industries, and market capitalization distribution. It helps identify market trends and gives stakeholders a clear starting point before deeper financial analysis.

Avg OPM by Industry

Profitability & Margins

Top Companies by ROCE 3Y

Sales vs Net Profit

Observations :-

Financial sector dominates profitability with highest **OPM**. Harsheep leads **ROCE** significantly. Sales volume is high in **Refineries** but net profit margins remain inconsistent across industries.

Top Sales growth by Industry

Observation:

Refineries leads across all three time periods (3Y, 5Y, 10Y) with consistently high sales growth. Domestic Appliances and Moulded Luggage show the weakest growth trajectory across all periods.

Insight:

Refineries sector demonstrates long-term sustainable revenue growth, making it a reliable candidate for portfolio inclusion. Industries with declining growth scores signal weakening business fundamentals.

Current V/s Intrinsic Value

Avg. Profit v/s EPS Growth

Overall Page Summary :-

The Growth & Valuation analysis reveals that Refineries and Shipping sectors demonstrate the most sustainable growth across revenue, profitability and shareholder returns. Saraswati Commerce and Bengal & Assam present compelling undervaluation opportunities. Investors should exercise caution with Banking and Consumer Discretionary sectors given their weak growth fundamentals.

Financial Health & Risk

Overall Page Observation:

Finance, Plastics and Power Generation sectors show triple threat high debt, negative Altman Z-Score and weak liquidity. These sectors pose the highest financial risk for investors. Transport Airlines and Banks Public Sector also require close monitoring given consistently weak financial health indicators across all three metrics.

Across all three financial health metrics, no single sector emerges as completely safe. While Steel and Textiles manage debt reasonably well, their liquidity remains under pressure. Financial services sector paradoxically carries the highest debt load despite being in the lending business. The consistent appearance of Plastics, Power Generation and Transport Airlines across all risk indicators confirms these as the most vulnerable sectors for investment exposure in current market conditions.
